

PARTNER WITH US

At SF Climate Week!

Force of Water

Thur | April 25th, 2024 | 5pm - 8pm

The Roxie's 518 Valencia Space

forceofwater.com/sf

Happy hour, sneak peek footage, and panel discussion centering community solutions in the climate conversation.

The Film

Follows two communities, one in Uganda and one in Ecuador, as they mobilize to build their own piped water systems.

The Panel

How can we connect the people building their own community-level solutions with global experts? This panel will immerse us in the lives and work of people living in rural communities on the front lines of climate change.

WHY PARTNER?

We all know that the majority of people most impacted by climate change have not reaped the benefits of the industrial advances causing this crisis. Help us put their stories front and center while we all work on the cross cutting issues of water, renewable energy and climate.

PARTNERSHIP PERKS:

	Wetlands \$5,000	River \$2,500	Stream \$1,000
Opportunity to speak at event and/or include a 30-second video in the event program	✓		
Logo on banner and table tents at event, recognition through social posts (audience of 9,500)	✓	✓	
Logo in slideshow at event, on website, in emails (5,000 person mailing list)!	✓	✓	✓
Gauranteed Invites	10	6	2

Talk to us about customizing your partnership level!

A DOCUMENTARY FILM

Force of Water

Who can solve the global water crisis? As our world becomes more water stressed, how do we build solutions that will stand up to climate change?

This one hour documentary film follows two communities, one in Ecuador and one in Uganda, as they confront these global dilemmas and mobilize to build their own piped water systems.

For **2.2 BILLION PEOPLE** clean safe water flowing through a tap is still a distant dream!

The film explores this reality through the eyes of local community members and regional program staff working together to build community wide water access. As the story unfolds, they meet challenges big and small. How will organizers confront their neighbors who are not showing up for communal work days? Will budget deficits derail or reshape the projects? And we begin to understand the collaboration needed between local, national, and international stakeholders to create lasting change.

SOLAR TIME MACHINE:

Solar water pumping has the potential to save families countless hours of time previously spent waiting in line, hand pumping, and hauling water. We witness the transformation possible when solar panels are added to a water system far from the national power grid.

GREEN EMPOWERMENT:

Green Empowerment works with in-country partner organizations to build clean water and renewable energy infrastructure with Indigenous and rural communities across the globe. We believe partnership and community ownership are essential for building solutions that last. Come see for yourself!
